**Abstract**—This article introduces ecology of the smallest creatures of Allah among 8.7 million creatures. Vast majority of creatures large (Dinosaurs) and smallest (Panda) are vanished or at the verge of vanishing. Animal suffering through medicine testing research or animal sexual abuse is increasing tremendously. Humans' behaviors are becoming aggressive towards smallest creatures of Allah Almighty which is not ethical or example of good conduct. Immediate measures and rules and regulations need urgent development to reduce animals suffering and pain and avoid vanishing smallest creatures from earth and safe ecosystem. This article highlights beauty of the presence of all creatures and their dependence on each other.

**Keywords**—Dinosaurs; Crocodile; Elephant; Lamb; Merri; Goat; Kerri

## Introduction

Allah created this earth to introduce Himself. Beauty of earth especially through Allah's creatures reminds us of Allah Almighty. It may be water lakes, fishes, microalgae, coral reefs and seals etc. Colonies of Merri, Kerri and Ants looks beautiful as they move on earth and manage their food. How awesome their movement is and how attractive they appeal while moving even the Kerri and Merri and Kerra they carry the dead bodies of their relatives or other fellows. How much love they possess to their fellow creature, how human can kill them, is unbelievable. Aggressive shooting of birds for food and violent prey practices are all unacceptable in the modern era. Sexual assault and animal abuse cannot be tolerated at all [1]. Animal health must be ensured in slaughter houses [2]. Physical, mental health, epilepsy, suffering, pain, diseases and endocrine disease are common occurring to animals and there may be more sufferings [3]. Animals and small creatures suffering cannot be tolerated as human suffering. Human behavior is getting violent and violent day by day. Animal human relation needs to be built [4].

## Materials and methods

This article is based on authors knowledge. No tests or animals are used in this research.

## Results and discussion

Merri and Kerri are smallest creatures on Earth. When I walk on earth, I never put my foot on the smallest creature on earth which is Merri and is slightly larger than Kerri. This justifies that we should not kill ants, animals or any creature present on earth.

Crow is believed to be present from Prophet Adam (AS). Elephant is one of the favorite animals, however it likes to eat banana tree leaf. On the other side, I like banana fruit. It's better to keep both, elephant and banana tree. Goats are also loveable and humble. It's heard that each most of the Prophets keep them. They provide milk. First priority is for their child's, however after a specific age, we may take a little bit. Cow milk is less viscous and probably good for babies. It's good that babies are fed from their mothers, however working women may be in trouble, in that case formula milk can be used. There may be peak and sneak. If mothers feed milk to their babies, they will love them most. Staying home, what about salary of women, they must not starve. Honey is good for stomach; however, source is honeybee. So not better to kill bees, until unless they try to bite you, but single is allowed. If they attack in more number, running is a better option or at least save yourself, but still, it doesn't justify killing them in great number. Flowers look beautiful, that's why bees move towards them and there is peak and sneak. Bees have two stomachs; purpose may be evident. Birds are loveable too, there are too many varieties. We cannot kill birds as few birds eat from the teeth of crocodile. This is its teeth cleaning system. Once Kerri or Merri has saved its fellow colleagues when companions of a Prophet were coming. This is mentioned in one of the Book of Allah. One grain of wheat is sufficient for Kerri for a year. Allah loves His all creatures. If we have to slaughter an animal for food, we must not scare it and need to show kindness. Even then, we must take care of its age, it must not be under specific age which differs for different animals. It's better to eat meat minimum which I do. If I eat meat, I only eat goat, lamb, beef or chicken and fish. Salmon may be increasing population of the fishes. Its taste is not that good compared to Barramundi, but we may keep it as second option. Fishes have reproductive system. This does not justify killing Salmon. Dinosaurs are believed to be alive 6500000000 years ago. Donkey was allowed to eat in Islam.

## Conclusions and recommendations

It's not better to disturb Ecosystem. If one creature is eating other, it may be its food and that which filled his stomach may be food for any other creature. It's heard that Allah Almighty created 8.7 Million creatures, why they are finishing, where are Dinosaurs and now Panda is in trouble. Finishing of creatures is indicating that earth is vulnerable, and Day of Judgment is a Truth. Each Prophet has informed about it. Allah loves His all creatures. Human interference and foreplay with animals may be

eliminating or vanishing Allah Almighty creatures. It does not indicate we can do what we want to do.
